1st and 2nd are a very close top pair both grading USDA Prime, Yield grade 3
1st place marbling quality was enough better to overcome a slight weight disadvantage

3rd place did not miss grading Prime by much, very well rounded and an easy pick behind the top two

On marbling quality alone, 5 sits above 4, having the same CAB certification with an obvious advantage in hot weight and yield grade I had to give 4 the placement over 5
